Soil Screening Guidance for Radionuclides: Technical Background Document

Soil Screening Guidance for Radionuclides: Technical Background Document

Office of Radiation and Indoor Air
Office of Emergency and Remedial Response
U.S. Environmental Protection Agency
Washington, DC 20460

DISCLAIMER

Notice: The Soil Screening Guidance for Radionuclides is based on policies set out in the Preamble to the Final Rule of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), which was published on March 8, 1990 (55 *Federal Register* 8666).

This guidance document sets forth recommended approaches based on EPA's best thinking to date with respect to soil screening for radionuclides. Alternative approaches for screening radionuclides in soil may be found to be more appropriate at specific sites (e.g., where site circumstances do not match the underlying assumptions, conditions, and models of the guidance). The decision whether to use an alternative approach and a description of any such approach should be placed in the Administrative Record for the site.

The policies set out in both the Soil Screening Guidance for Radionuclides: User's Guide and the supporting Soil Screening Guidance for Radionuclides: Technical Background Document are intended solely as guidance to the U.S. Environmental Protection Agency (EPA) personnel; they are not final EPA actions and do not constitute rulemaking. These policies are not intended, nor can they be relied upon, to create any rights enforceable by any party in litigation with the United States government. EPA officials may decide to follow the guidance provided in this document, or to act at variance with the guidance, based on an analysis of specific site circumstances. EPA also reserves the right to change the guidance at any time without public notice.

 Part 1: INTRODUCTION	
1.1 Background	1-2
1.2 Purpose of SSLs	1-2
1.3 Scope of Soil Screening Guidance for Radionuclides	1-4
1.3.1 Exposure Pathways	1-4
1.3.2 Exposure Assumptions	1-5
1.3.3 Risk Level	1-6
1.3.4 SSL Model Assumptions	1-6
1.4 Organization of the Document	1-7
 Part 2: DEVELOPMENT OF PATHWAY-SPECIFIC SOIL SCREENING LEVELS	
2.1 Human Health Basis	2-2
2.1.1 Additive Risk	2-11
2.1.2 Toxicokinetics of Radionuclides	2-11
2.2 Direct Ingestion of Soil	2-11
2.3 Inhalation of Fugitive Dusts	2-13
2.3.1 Screening Level Equation for Inhalation of Fugitive Dusts	2-13
2.3.2 Dispersion Model	2-13
2.3.3 Particulate Emission Factor	2-16
2.4 External Exposure from Radionuclides in Soil	2-17
2.4.1 Gamma Shielding Factor - GSF (Unitless)	2-18
2.5 Ingestion of Homegrown Produce	2-19
2.6 Migration to Ground Water	2-20
2.6.1 Development of Soil/Water Partition Equation	2-21
2.6.2 Inorganics (Metals, including radionuclides)—Partition Theory	2-24
2.6.3 Assumptions for Soil/Water Partition Theory	2-24
2.6.4 Dilution/Attenuation Factor Development	2-25
2.6.5 Default Dilution-Attenuation Factor	2-30
2.7 Mass-Limit Model Development	2-31
2.7.1 Mass Balance Issues	2-31
2.7.2 Migration to Ground Water Mass-Limit Model	2-31

LIST OF HIGHLIGHTS

Highlight 1.	Key Attributes of the Soil Screening Guidance for Radionuclides	1-4
Highlight 2.	Simplifying Assumptions for the Migration to Ground Water Pathway	2-21
Highlight 3.	Procedure for Compositing of Specimens from a Grid Sample Using a Systematic Scheme (Figure 6)	4-12
Highlight 4.	Procedure for Compositing of Specimens from a Grid Sample Using a Random Scheme (Figure 7)	4-14
Highlight 5.	Procedure for Compositing of Specimens from a Stratified Random Sample Using a Random Scheme (Figure 8)	4-15
Highlight 6.	Directions for Data Quality Assessment for the Max Test	4-18
Highlight 7.	Directions for the Sign Test	4-25

PREFACE

This document provides the technical background for the development of methodologies described in the *Soil Screening Guidance for Radionuclides: User's Guide* (EPA/540-R-00-007), along with additional information useful for soil screening. Together, these documents define the framework and methodology for developing Soil Screening Levels (SSLs) for radionuclides commonly found at Superfund sites. This document is similar to a previous guidance document issued by EPA entitled *Soil Screening Guidance: Technical Background Document* (EPA/540/R-95/128), which contains information regarding the soil screening of chemicals commonly found at Superfund sites. This guidance document intended to be consistent with the 1996 guidance document except where it was necessary to be different based on a technical difference posed by radionuclides.

ACKNOWLEDGEMENTS

Early drafts of this technical background document were prepared by Sandy Cohen and Associates (SC&A) under EPA Contract 68D70073 for the Office of Radiation and Indoor Air (ORIA), and the Office of Emergency and Remedial Response (OERR) U.S. Environmental Protection Agency (EPA). Phil Newkirk of EPA, the EPA Work Assignment Manager for this effort, guided the effort. Phil Newkirk and Ron Wilhelm of ORIA, and Stuart Walker of OERR, are the principal EPA authors of the document, with significant contributions from Ken Lovelace and Janine Dinan of OERR. John Mauro is the SC&A work assignment Leader and principal SC&A author of the document. Phil Newkirk and Mike Boyd of ORIA conducted the analysis of area correction factors for direct gamma radiation. David Jewett of the Office of Research and Development (ORD) conducted the analysis of more complicated groundwater models. The authors would like to thank all EPA reviewers whose careful review and thoughtful comment greatly contributed to the quality of this document.
